

Albutt F301 Bale Grab

£POA

The Albutt F301 Bale Grab is designed to handle round, wrapped bales of silage. The heavy duty design features smooth and large flat face contact points, ensuring the bale wrap is protected.

The rollers are free to spin on forged steel tines featuring two plain bearings to ensure free rotation around the tine. The rollers are quickly and easily removed to expose two 1100mm forged steel tines. This means the handler can then be used as a bale spike for round and square straw bales. Each roller is secured with a bolted latch which can be mounted on either side of the handler arm. Currently in stock with Merlo brackets and check valve. Contact us for availability
