

## Arrowquip 8ft, 10ft and 12ft Crowding Pen

### £POA

The 3E System makes use of light and cattle behaviour to create flow, allowing for easy entry and exit. By strategically placing low 851mm sheeted panels across the point of entry and next to the forcing pen exit, cattle are drawn into the right direction as they see more light. The 3E BudFlow Forcing Pen greatly improves how cattle flow through the pen into the race by using cattle psychology to your advantage, allowing you to save time and effort.
