High quality forages such as alfalfa are abundant in natural vitamins and minerals. In low calorie formulations where straw is included to bring the calorie value down, the mineral levels are also reduced. The use of premixes and ingredients such as MSM help to counter this effect.

Healthy Hooves Molasses Free is packed with B vitamins including biotin at levels that research has shown to improve hoof quality. When fed at the recommended rates it will provide a 500kg horse with 10g of biotin per day.
