

JFC Mini-Saber Solar Floodlight

£84.99

The JFC Mini Saber is the ideal solution for anyone looking for some self-sufficient outdoor lighting where the area is smaller (10m x 15m), that won't cost the earth to buy/install and nothing at all to run. It has a long run time. It's recommended that these are installed at around 2.5-5 metres high so you get the best detection and light coverage, the detection distance will be around 8–12 metres. These are ideally suited to farmyards, stable yards, walkways and general outdoors areas, in short anywhere that you may need light when it's dark.
